Sidde Gnaneswar Reddy

LinkedIn: www.linkedin.com /siddereddy07 **Email**: gnaneswar.sidde@gmail.com
GitHub: https://github.com/SiddeGnaneswarReddy **Mobile**: +919705017494

Skills

- **Languages**: Java, Python, C, SQL, HTML, CSS
- **Frameworks**: Excel, Tableau, NumPy, Pandas, Matplotlib, Seaborn
- **Tools/Platforms**: Excel, Git, Tableau, Jupyter Notebook
- **Soft Skills**: Leadership, Collaborative, Problem solving, Adaptability

Internship

Software Intern | Link
Android Studio | Android studio June 25 –July 25

- Developed and maintained Android Application features using java.
- Integrated REST APIS using retrofit/Volley and JSON data dynamic app functionalities.
- Successfully completed the training with a strong understanding of system-level operations, demonstrating a strong ability to maintain and troubleshoot enterprise environments.
- Developed a comprehensive understanding of the Red Hat Enterprise Linux (RHEL) ecosystem and its role in modern IT infrastructure.

Projects

Olympic Medal Data Analysis | *NumPy, Panda, Matplotlib, Seaborn, Plotpy and Python* July 25

- Performed EDA on a 120+ Countries.
- Executed comprehensive data preprocessing on over 270,000 Olympic records, handling missing values in medal categories and standardizing country names for consistent historical analysis.
- Utilized bar charts and choropleth maps to visualize medal distribution, identifying the all-time top-performing nations and their dominance across different sporting events.
- Analyzed historical trends with line plots to track the performance of key countries over decades and visualize the growth of female athlete participation in the Games.
- GitHub Link: https://github.com/SiddeGnaneswarReddy/Olympic-medal-data-Analysis

Tower of Hanoi Solver | *Python, Tkinter* Feb 25

- Developed the core game engine in Python, implementing the classic **recursive algorithm** to generate the optimal sequence of moves for solving the puzzle.
- Engineered a data structure to **manage the state of the three pegs**, accurately tracking the position of each disk throughout the solving process.
- Designed a dynamic GUI using **Tkinter** to provide a clear, real-time visualization of the pegs and disks, animating each move as the algorithm executes.
- Implemented user controls to allow for the **customization of the number of disks**, enabling the demonstration of the solver's scalability and efficiency with varying complexity.
- GitHub Link: https://github.com/SiddeGnaneswarReddy/Tower-of-hanoi

Certificates

- **Python for Data Science and Machine Learning** – *Link* *August 2023*
- **Digital Systems: From Logic Gates to Processors** – *Link* November 2024
- **Data Structures and Algorithms with Java** – *Link* September 2024
- **Computer Programming** – *Link* May 2024
- **Amazon Clone Using HTML, CSS & JavaScript**– *Link* February 2024

Achievements

- **Naukri campus Young Turks:** Nov 24
  Qualified the first round on Naukri campus.
- **Leetcode:** Nov 24
  Solved 50 plus problems on leetcode.

Education

- **Lovely Professional University** Phagwara, PB
  Bachelor of Technology - Computer Science and Engineering; CGPA:7.05 *Aug 23 - Present*
- **Sri Chaitanya Junior College** Kakinada, AP
  Intermediate; ***Percentage: 95.1%*** *June 21 –Mar 23*
- **Viswabarati High School** Vijaywada, AP
  Matriculation; ***Percentage: 100%*** *June 20 – Mar 21*
