## Skills

- **Languages**: Python, C, Java, SQL, HTML, CSS
- **Frameworks**: Pandas, NumPy, Seaborn, Matplotlib, TensorFlow, Sklearn
- **Tools/Platforms**: Excel, Git, Tableau, Power BI, Cisco Packet Tracer, Jupyter Notebook
- **Soft Skills**: Leadership, Adaptability, Problem-solving, Project management

## Projects

**Stoke Prediction** | *Python, Pandas, Matplotlib, Seaborn, NumPy, Sklearn, Flask* Aug'25 – Oct'25

- Built an end-to-end machine learning pipeline in Python using Pandas and scikit-learn to predict stroke risk from clinical health indicators.
- Conducted exploratory data analysis to uncover key risk patterns, including significantly higher stroke prevalence among patients with glucose levels above 200 mg/dLs.
- Cleaned and pre-processed the dataset by imputating missing BMI values, encoding categorical variables, and preparing features for model training.
- Compared multiple classifiers and selected **LDA** as the most stable and accurate model, achieving an ROC-AUC of ~0.79, indicating good discrimination performance for stroke risk prediction.

**Customer Churn Prediction** | *Python, Pandas, Matplotlib, Seaborn, NumPy, Sklearn* Mar'25 – Jun'25

- Designed and implemented a machine learning solution to predict customer attrition using structured telecom data.
- Performed detailed EDA including univariate and bivariate analysis to identify churn factors like tenure, usage frequency, payment delay, subscription type, and customer support interactions.
- Applied data preprocessing steps such as handling missing values, removing outliers, encoding categorical variables, feature scaling and analyzing class imbalance.
- Achieved 80% accuracy with Logistic Regression as the best-performing model.

**Pizza Sales SQL Analysis** | *MySQL, Data Analysis* Dec'24-Jan'25

- Analyzed a pizza sales dataset using SQL to answer key business questions on total orders, revenue, top-selling pizzas, and most common pizza sizes.
- Performed intermediate analysis using JOINs and GROUP BY to evaluate category-wise sales, hourly order distribution, and daily average pizza demand.
- Conducted advanced SQL analytics including cumulative revenue trends and percentage revenue contribution of each pizza type.
- Identified top revenue-generating pizzas and summarized insights to highlight sales patterns, peak demand hours, and major contributors to total revenue.

## Certificates

- Java Language – Coursera Nov'25
- Oracle Analytics Cloud – Oracle Oct'25
- Introduction to Data Analytics – IBM Sep'25
- Software Engineering: Implementation and Testing – Coursera May,24
- Software Development Processes and Methodologies – Coursera Apr'24

## Achievements

- **Aptitude:** Nov'24
  Qualified the first aptitude round on Naukri Campus.
- **HackerRank:** Aug'24
  Earned 3 Stars in SQL

## Education

**Lovely Professional University**
*Bachelor of Technology - Computer Science and Engineering* *Aug' 23 – Present*

**Sri Chaitanya Junior College**
*Intermediate; Percentage: 97.4%* *Apr'21 – Mar'23*

**SPC Sreshty MPL High School**
*Matriculation; Percentage: 94%* *Apr'20 – Mar'21*
